

ZAP Control

Irrigation controller voltage surge suppressor

WHAT CAN THE ZAP CONTROL DO?

Valve and communication wires can act as an antenna when lightning strikes. The ZAP Control helps to divert that energy to earth ground BEFORE it reaches your equipment!

Valves and wires can short, damaging your controller. ZAP CONTROL with Fuse Protection turns off the power to that valve until it is repaired, then will automatically restore power! All other valves will continue to operate.

It takes two people (or you running back and forth) to see what valves are turned on. ZAP CONTROL with LED indicators let you see what is on at your controller!

- **Protects almost any 24vac irrigation controller!**
- **Valve operation indicators. For easy trouble shooting!**
- **Fuse protection for each valve. Automatically resets. No fuses to replace!**

SPECIFICATIONS:

- **Terminal block Wire Range 30-16AWG**
- **Ground Lug Wire Range 6- 14AWG**
- **Fuse protection** **Rated current .3Amp/per zone**
- **Surge protection** **Rated AC voltage 40vac**
 Surge voltage 3kva

Will work with: Most models of 24vac irrigation controllers such as Rainbird, Hunter, Orbit, ect. and the WGL & Associates Rain8 family.

Three RS-232 choices

- 40610 STANDARD (RJ-11)
- 40620 CAT5 CONVERSION (RJ-45)
- 40630 CABLE TERMINATION
